Key lever

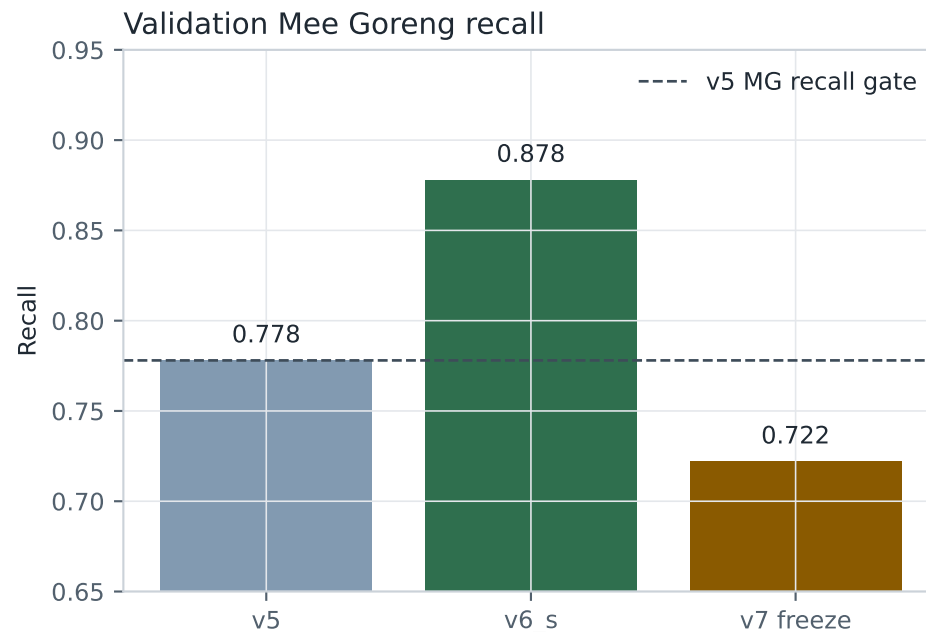

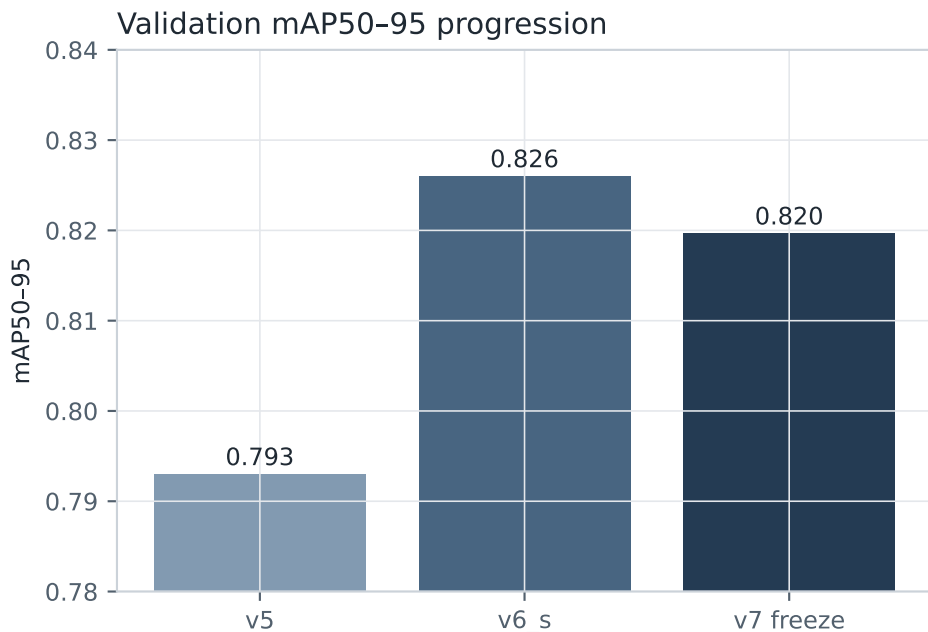

Headline checkpoints

Checkpoint	Precision	Recall	mAP50	mAP50-95
Best (epoch 30, selected)	0.927	0.898	0.950	0.820
Peak mAP50 (epoch 20)	0.936	0.885	0.956	0.815
Last (epoch 50)	0.935	0.904	0.952	0.815
v5 nano baseline (val)	0.894	0.899	0.945	0.793

Training curves (validation metrics by epoch)

Mee Goreng tradeoff and next-step gate

Findings

freeze=10 + lr0=0.0002 + cos_lr escaped the epoch-1 fitness peak seen on v3-v5 fine-tunes.

- Best at epoch 30: mAP50-95 0.820
- Beats v5 aggregate (0.793) ✓
- Mee Goreng recall 0.722 < v5 0.778 ✗
- ~22% MG→CKT on HPC normalized matrix
- Chicken Rice mAP50-95 ~0.735 (still weak)

Not promoted. Became the nano init for interim v8.
Run B (v7_n_box) was superseded by v8_n_box.
